1. Introduction

1.1. Introduction:

Medical Shop Management System project used to maintain and track medicine stock inventory detail and store customer and detail for medical store. The Medical store system used in medical store. This Module stores detail of medicine purchase stock and sell stock. We can maintain purchase stock detail by company wise sell stock detail by customer wise. This module automated generate sell record for every selling and generate reports for stocks, sell, and customer detail. As we know that all dynamic website or software needs database, here in this medical store system project we use SQL database. This project medical shop management system has been developed on C# and SQL Server. The main objective for developing this project is to convert the manual system of the medical shop in to the computerized system, by which an end user will able to manage the medical records very well and accurate. This project intends different type of forms with different of medicines varieties provides to user. We can develop many modules for this project such as medicine management etc. This application is a good appearance and is very simple and easy to access at ASP.NET. It is very simple source code. It saves our time and Money. This project provides a lot of features to manage in very well manner.

1.2. Objective of system:

As this is generic software it can be used by a wide variety of outlets (Retailers and Wholesalers) to automate the process of manually maintaining the records related to the subject of maintaining the stock and cash close.

This project is basically updating the manual chemist inventory system to automated inventory system, So that organization can manage their record in efficient and organized form.

This software helps you to track all the products of Medical Shop moreover it's a medical shop accounting software. Flexible adaptive software suited to medical shops or stores or pharmacies of any size.

The main goal of application is to maintain the records to purchase, sales and stock details with cash transaction maintenance.

Medical store management software is very needy for medical store. This software helps them maintain day to day transaction in computer.

1.3. Scope of System:

The medical store management system helps in gathering the perfect management in the details. The collection and storage of data with the help of this project will be sensible, obvious and simple. It also helps in understanding the management of the previous time vividly. It also helps in performing the various functions of medical store. The medical store management system is developed to provide ease in documentation, keeping records, maintaining inventory and payment in the medical store which requires proper record keeping and management.

1.4. Existing System:

Existing system is very complicated to keep the track of all registers and handle them manually. As well as this work is time consuming & also expensive in this system report work may be not accurate and not fastest. To avoid all these limitations and make the working more accurately the system needs to be computerized.

1.5. Proposed System:

In proposed system the management needs not to keep any type of registers, which they use to keep in old one. They have work only with one computer. All the details are stored in computer files. The working through registers system is not only very laborious and time consuming, but there are number of errors found. In comparison to old system the proposed system of computer processes many advantages.

1.1 Introduction of the Project

Hospitals are the essential part of our lives, providing best medical facilities to people suffering from various ailments, which may be due to change in climate, stress, improper diet, over-work, emotional distress, etc. It is necessary for the hospital to keep track of its day-to-day activities and records of its patients.

But, it also is very inefficient and a time-consuming process of observing and maintaining all these records. It is highly impractical, tedious and error-prone. It is also not economical. Hence, the need for an automated system for these records.

1. INTRODUCTION

Thus, keeping the working of the manual system as the basis of our project. We have developed an automated version of the manual system, named as "Hospital Management System".

1.1 Introduction of the Project

Hospitals are the essential part of our lives, providing best medical facilities to people suffering from various ailments, which may be due to change in climatic conditions, increased work-load, emotional trauma stress etc. It is necessary for the hospital to keep track of its day-to-day activities and records of its patients.

But, it also is very inefficient and a time-consuming process observing and maintaining all these records is highly unreliable, inefficient and error-prone. It is also not economically and technically feasible to maintain these records.

Thus keeping the working of the manual system as the basis of our project. We have developed an automated version of the manual system, named as **“Hospital Management System”**.

1.2 Objective of System

The project “Hospital Management System” is aimed to develop to maintain the day-to-day state of admission/discharge of patients, list of doctors, report generation and etc. It is designed to achieve the following objectives:

- To computerize all details regarding patient's details and hospital details.
- The inventory should be updated automatically whenever the transaction is made.
- The information of the patients should be kept up to date and their record should be kept in the system for historical purposes.

1.3 Scope of the System

The proposed Software product is the “**Hospital Management System**” (HMS). The System will be used in any hospital, clinic, Dispensary or Pathology labs in any hospital, clinic, Dispensary or Pathology labs to get the information from the patients and then storing that data for future usages.

1.3 Existing System

- Existing Hospital Management System was manual so all records of the treatments were stored in files or in registers it was difficult to maintain all the records of treatments manually.
- As all the work was done manually the data was not secured and may have always a risk of losing the data.

1.5 Proposed system

The Hospital Management System (HMS) is designed for any Hospital to replace their existing manual, paper based system. The new system is to control the following information, patients information, room availability, staff and operating rooms schedules, and patients invoices. These services are to be provided in an efficient, cost effective manner, with the goal of reducing the time and resources currently required for such tasks.
